MIAMI

CANOPY SYSTEM

ENHANCE YOUR ENTRY

MIAMI

CANOPY SYSTEM

DURABLE SHADE + MODERN STYLE

The Miami Canopy is a high-performance, prefabricated architectural shade system engineered from extruded aluminum components. Designed for durability, versatility, and aesthetic integration, it provides a complete solution for both commercial and residential applications.

Manufactured using aluminum, the Miami Canopy offers exceptional resistance to corrosion, wind, and harsh environmental conditions, making it ideal for demanding climates such as coastal and tropical regions.
The system incorporates structural gutter beams, fascia profiles, and deck pans, all precision-fabricated to ensure proper drainage and long-term performance. Its modular design allows for seamless integration into new or existing structures, delivering both functional protection and refined architectural appeal.

Initial Consultation

We start an initial consultation to review your property and discuss your wants and needs.
We evaluate:

- Project location and architectural context.
- Dimensions, clearances, and setbacks.
- Wall attachment conditions.
- Drainage requirements and environmental exposure.
- Budget and design expectations.

This phase allows us to define a fully customized and technically sound canopy solution from the outset.

Design, Documentation & Submittals

In this phase, the Miami Canopy system is fully designed and engineered, we work closely with clients, and engineers to develop the structural system and support.
Documentation provided includes:

- Project-specific shop drawings (submittals)
- Connection and attachment details
- Material Selection & Customization

These documents clearly communicate exactly what is being fabricated and how it will connect to the structure, ensuring accuracy and approval prior to production.

Build & Installation

The installation process is executed with a focus on efficiency, structural integrity, and proper system performance.
Each Miami Canopy installation includes:

- Flashing & sealants for proper water management
- All required mounting hardware
- Proper alignment and anchoring to the structure

Our installation approach ensures that the system performs reliably under environmental conditions such as sun exposure, wind, and rain.

Final Inspection & Project Closeout

At project completion, a detailed inspection is conducted to verify that all components meet design specifications and performance standards.
No project is considered complete until:

- Installation is fully compliant
- System performance is verified
- The client is 100% satisfied

PRE- ENGINEERED ALUMINUM CANOPY

MIAMI

CANOPY SYSTEM

STANDARD CONSTRUCTION W/ HANGERS

Material: Extruded Aluminum
Fabrication Method: Welded & Fastened
Deck Pan: 2" x 8" Roll Formed
Fascia Profile: 3" x 8" Gutter Fascia
Projection: 1' to 12'

Width: Single unit up to 24', Multiple units Unlimited
Scuppers: 2 per Unit
Brackets: 2"x2" Extruded Aluminum brackets.
Flashing: yes
Mounting: Concealed.

STANDARD CONSTRUCTION FLOATING

Material: Extruded Aluminum
Fabrication Method: Welded & Fastened
Deck Pan: 2" x 8" Roll Formed
Fascia Profile: 3" x 8" Gutter Fascia
Projection: 1' to 5'

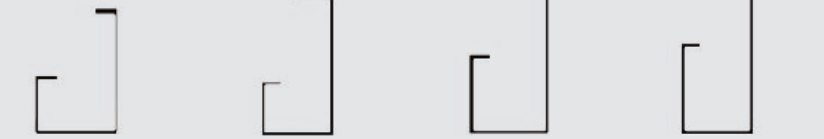

Width: Single unit up to 24', Multiple units Unlimited
Scuppers: 2 per Unit
Brackets: 4"x2" Extruded Aluminum brackets.
Flashing: yes
Mounting: Concealed.
